## HOW DOES RS9000XL™ WORK?

The MyRide™ tuning controller meters oil flow inside the shock controlling compression and rebound. The result is 9 different levels of enhanced performance with each resulting in a noticeable change (Setting 1 = Soft / Setting 9 = Max Control).

\* Remote tuning requires installation of 4-corner RS9000XL™ or QuickLIFT™ shocks.

## HOW DO YOU ADJUST A RS9000XL™ SHOCK?

Adjusting a RS9000XL™ is quick and simple. To tune your shock manually simply rotate the MyRide™ tuning control, at the base of the shock, clockwise to firm your ride and counter clockwise to soften your ride (Setting 1 = Soft / Setting 9 = Max Control).

Take full advantage of the 9 levels of performance offered in the Rancho® RS9000XL™. Upgrade to the Rancho® MyRide™ Wireless Controller and instantly adapt to any driving condition with handheld control. Part Number RS999705\*

\* Remote tuning requires installation of 4-corner RS9000XL™ or QuickLIFT™ shocks.
